Circumcision

America is the western nation with the highest proportion of infant male circumcisions. Many do it for non-religious and non-therapeutic reasons. Due to different tracking measures and non-uniform reporting of newborn circumcisions, the prevalence is difficult to measure accurately. One American [healthcare agency report in 2012](#) found that circumcisions had dropped from around 60% in 2000 to 54.5% in 2009. Extracts from Halgolla Plantation Home -November issue

With Ranjit Hulugalle and what was left of our Cannonball Tree (*Couroupita*)

Too often we appreciate people who give of their time and energy for the betterment of Sri Lanka but we don't go the extra yard of publicizing their contribution as widely as we are able. The picture that is at the top of this month's newsletter is an attempt to make amends in that regard by acknowledging the contribution that Ranjit Hulugalle is making in the matter of defending a Sri Lanka that is under serious threat of major environmental degradation. Thank you, Ranjit, for your "no punches pulled" defence of what is our national heritage!

The rains continue and despite the rampant soft-weed growth, we will continue to live up to our promise of not complaining about the weather after the years of terrible drought that we have experienced around here. If anything could make ordinary citizens into those derisively referred to as "tree-huggers," the global-warming we've experienced over recent times would do the trick!

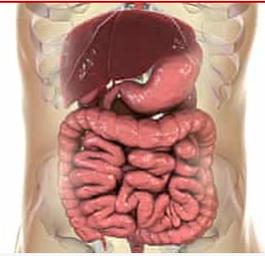

We have begun harvesting our very small vanilla crop and the first instalment yielded a fraction of last year's as was to be expected, given the fact that we had about 1/3 the blossoms we did in 2018. Not much one can do when Mother Nature decides to act up! The unfortunate part is that selling prices remain at last year's levels!

By Serena Gordon
HealthDay Reporter

TUESDAY, Sept. 17, 2019 (HealthDay News) -- Chinese researchers may deserve a toast for their new findings that suggest light to moderate drinking may be beneficial for people with [type 2 diabetes](#).

The review found that people who had a bit of [alcohol](#) daily had lower levels of a type of blood fat called [triglycerides](#). But alcohol didn't seem to lower [blood sugar levels](#) in people who already had [type 2 diabetes](#), the review found.

The research did show lower levels of [insulin](#) and improved insulin resistance in people who drank light to moderate amounts of alcohol, study lead author Yuling Chen said. Chen is a medical student at Southeast University in Nanjing, China. That finding suggests that "light to moderate alcohol consumption might protect against [type 2 diabetes](#)," Chen said.

But Chen cautioned that you can have too much of a good thing: "High alcohol consumption is reported to be a risk factor for [diabetes](#)."

High cholesterol can hurt your sex life.

High cholesterol can slow pelvic blood flow, making it harder to get aroused and to have a satisfying romp in the hay. Both men and women are at risk. Cholesterol narrows blood vessels everywhere from the heart to the pelvis. In men, erection problems can even be an early warning sign of heart disease.

Happily, healthy habits to better your cholesterol levels may improve your libido, too. That means exercising, eating right, and maintaining a healthy weight.

Which is worse for your cholesterol?

scoop of ice cream

Just a small scoop of ice cream packs 11 grams of saturated fat -- far more than in an egg or a steak. And the more saturated fat you eat, the higher your "bad" cholesterol can rise.

You still need to limit the cholesterol you eat, though. Less than 10 percent of your calories should come from saturated fats. Keep trans fats consumption as low as possible by limiting foods that contain synthetic sources of trans fats, such as partially hydrogenated oils, and by limiting other solid fats. For example, replace foods that are higher in solid fats (e.g., red and processed meats), with choices that are lower in solid fats and calories and/or are sources of oils. These include seafood, legumes (beans and peas), and nuts, seeds, and soy products, as well as lean meats, poultry, and eggs.

Why is LDL called "bad" cholesterol? It clogs blood vessels.

If there's too much LDL in your blood, it can collect on the walls of your arteries, forming plaque. This buildup narrows and stiffens the arteries -- putting you at risk for a heart attack or stroke.

In the past, guidelines focused on lowering LDL levels to specific "target" numbers. Now, lowering your cholesterol is just one part of an overall strategy for reducing your total risk for heart disease.

How much cholesterol should you have per day?

Dietary cholesterol is the cholesterol a person gets from the foods they eat. These include most animal products. Learn about the new recommendations about how much cholesterol and fat to consume here.

Can bananas help you lose weight?

Bananas may help people feel full for longer and increase their potassium and fiber intake. Learn more about how bananas may aid weight loss efforts here.

Your Social Network Can Make You Stronger

Mounting evidence from many studies suggests loneliness and social isolation are very detrimental to health. In one study, those with the strongest social relationships were most likely to live longer than those with poor social connections. There are lots of ways to develop and strengthen social ties. Pick up the phone and call friends regularly. Make plans to get together in person. Volunteer for a cause you believe in. Join a class or join a group related to an interest or hobby you have. Keep up with old friends and make new ones to strengthen and expand your social circle.

Belly Laughs Are Good for You

Can laughter really boost your immune system? Results of some studies suggest it can. In a study of healthy males, watching a funny movie boosted natural killer cell activity while watching an emotionally neutral movie did not boost immune system function. While more research is necessary to establish a conclusive link between laughter and improved immunity, go ahead and have a good chuckle. Belly laughs feel great. They can't hurt and they might help boost your immune system and reduce the likelihood of illness.

They Protect Your Cells

Antioxidants are compounds in colorful fruits and vegetables that protect against free radicals. Free radicals can damage DNA and other cell components. Fruits and vegetables in a wide array of colors provide the best mix of protective antioxidants to boost overall health and immunity. Eat leafy greens, watermelon, carrots, berries, broccoli, oranges, kiwi, cantaloupe, and other brightly colored produce to give your cells and immune system all the natural protection they need to function at their best. Homemade chicken soup with carrots, celery, and other veggies can also be a boon to your immune system.

Healing Plants

Some research has suggested that compounds in herbs and supplements can enhance immunity. Garlic, astragalus, milk thistle, ginseng, green tea, black cumin, and licorice are just a few herbs that have been reported to have immune boosting benefits. Talk to your doctor or pharmacist before including herbs and supplements into your regimen. They may produce side effects, especially when combined with other herbs, supplements, or medications. Probiotics are beneficial strains of bacteria that have also been described as immune boosters. Look for probiotic supplements with lactobacillus and bifidobacterium. Probiotics can also help improve digestive health.

Move Your Body

Exercise has numerous health benefits including protecting you against heart disease, osteoporosis, and even certain types of cancer. Exercise is also an immune booster. To reap maximum benefits, try to be moderately physically active for at least 30 minutes on most days of the week. Walking is one of the simplest ways to exercise. If you're not excited about walking, try yoga, swimming, cycling, or golf. Gardening is also a good way to get some outdoor activity.

Analysis: Have a cough you can't get rid of? Here's how to treat it

EXCELLENT TIP i.e.
ALWAYS INSERT YOUR
EMAIL ID IN YOUR PASSPORT ON THE
ADDRESS PAGE.
READ ON TO KNOW WHY.

For all frequent flyers ... do check this one out
...

This is an incident that occurred at the airport
yesterday.

A passenger with an American passport,
changed money, and in the process, forgot his
passport and boarding pass on my counter. As
it was placed on the side, where my monitor
blocks the view; it remained there for over 20
minutes.

The next customer brought it to my attention. I
went outside, to search for him but to no avail.
The passport was well worn, with numerous
visas, including Japan. He had travelled from
Narita to LAX.

The page in the U.S. passport where one can
write home address and third party contact was
blank. All it had was his e-mail address.

I went on line, and e-mailed him a brief
message, including my phone number.
He turned up about a half hour later, profoundly
grateful. He was blissfully unaware that his
passport was missing!

He was checking his e mail in the cab when he
saw the mail I had sent. He turned the cab
around and came back to the airport to collect
it.

He works in Japan and his work permit was
attached to the Japanese visa in the passport.
He was in the US only for a week.

In retrospect, it is evident that even if he had
written his address in the passport, it would not
have helped. Even a phone number is not much
help, as a finder may not be willing to call long
distance, if 'found' in another country.

An e-mail, any one would send, from any place;
and you can access your e-mail from anywhere
in the world, when you are traveling!

Therefore PLEASE WRITE YOUR E-MAIL
ADDRESS IN YOUR PASSPORT

From Max
