Research has shown that people who are most likely to have heart disease can lower their risk by as much as 80% if they do these easy things.

The evidence for why we should all wear masks

We should all be wearing masks to protect each other from COVID-19. That's the conclusion of [an overview of the current evidence for airborne transmission of SARS-CoV-2](#), by atmospheric chemist Kimberly Prather and three colleagues. The authors also looked at the effect of masks in countries where they are commonplace, and the efficacy of other measures, such as people staying 2 metres apart. Although more research is needed, the authors argue that "airborne spread from undiagnosed infections will continuously undermine the effectiveness of even the most vigorous testing, tracing, and social distancing programs." [Science | 10 min read](#)

WILLIAM TYNDALE the man who translated the Bible into English and was burnt alive at the ridiculous young age of 42 years old, for his efforts.

Nearly 500 years ago, this week, William Tyndale, fondly called 'Father of the English Bible' was strangled and burned at the stake after being tried and convicted of heresy and reason for translating the Bible into English.

HIS OFFENSE!
He translated the Greek Bible into English

Surgery-free pain relief for hips and knees

Ultrasound, phonophoresis, and iontophoresis

Therapeutic ultrasound is a simple procedure that uses sound waves to increase blood flow, relax muscle spasms, and aid healing that leads to faster hip pain relief and knee pain relief. The therapist applies gel to your skin and moves an ultrasound wand over your skin around the painful area. In a special ultrasound technique called phonophoresis, medication (often hydrocortisone) is added to the gel. In a survey of orthopedic physical therapists, more than half said they would use ultrasound and phonophoresis to reduce soft-tissue inflammation (in tendinitis or bursitis, for example). These techniques are also used to manage pain, heal tissue, and help muscles stretch.

"There's plenty of data that [meat] increases the risk of colorectal cancer, other types of cancers, heart disease, diabetes, and the higher risk of dying from these things." Some of these health conditions are especially serious during the pandemic. "With Covid-19, the underlying conditions of heart disease and diabetes increase the risk. You become much more vulnerable and increase the risk of dying and complications."

Hydroxychloroquine study questioned

Last week, the World Health Organization (WHO) and regulators in the United Kingdom, France and Australia paused the testing of hydroxychloroquine as a COVID-19 treatment because of safety concerns. A large observational study published in *The Lancet* linked the antimalarial drug to an elevated risk of death and abnormal heart rhythms when used as a coronavirus therapy. [Now the study itself is under scrutiny](#): 120 researchers have signed a letter to the journal highlighting concerns about the quality of the data and its analysis. Researchers are worried that hydroxychloroquine's bad press will dissuade people from joining further trials — leaving questions about the drug unanswered.
