Christmas Message from Rev. Kanishka Raffel-Dean of Sydney

This year has been wretched in so many ways. First there was the grief of so many plans that had to be abandoned. Then, for many, there was real loss - of jobs, businesses, education, travel. We've not had the chance to celebrate birthdays, anniversaries, graduations. Perhaps hardest of all, the loss of loved ones has been made all the worse because we have not been able to gather with others for comfort, and fond recollection and thanksgiving for the lives of our dear ones. A whole new vocabulary has become commonplace - 'self-isolation', 'physical distancing', 'sanitise'. Perhaps this year, more than most, we long for the coming of the light. "The people who walked in darkness have seen a great light; those who dwelt in a land of deep darkness, on them has light shined", the biblical prophet Isaiah says. The coming of Jesus Christ into the world is the shining of the light of God's love upon a world that has wandered from him and fallen into darkness and gloom. He does not leave us in lonely isolation but comes among us as one of us, 'God with us'. He refuses to keep his distance though we often distance ourselves from him. He comes to wash us clean of guilt and fear and shame, and to dress us in Christmas robes of joy and peace and gladness. The angel says, "I bring you good news of great joy that will be for all the people. For unto you is born this day in the city of David a Saviour, who is Christ the Lord." We thank God that progress has been made in the development of a vaccine for covid-19, and that in Australia, unlike so many other places, the worst effects of the virus have been limited. But as this year has reminded us that we are not masters of our own destiny, Christmas assures us, we are not alone, and we are loved. News of great joy, for all the people, Christ the Saviour is born!

Christmas Message from Pastor Lanil Gunasekera

We know we are approaching Christmas when we see Santa Claus, on T.V., Bill boards and in the papers. It is sad that the greatest event in the history of mankind has been Replaced by a man who does not exist. The parents give gifts to their children and then lie about it that it came from Santa Claus. Or I have seen at shopping centers little ones been forced to take photos of someone dressed as supposed to be like Santa? To their dread. **WHAT IS CHRISTMAS?**

In the Bible the prophet Isaiah Writes:

"For a child is born to us, a son is given to us. The government will rest on his shoulders. And he will be called: Wonderful Counselor, Mighty God, Everlasting Father, Prince of Peace. His government and its peace will never end. He will rule with fairness and justice from the throne of his ancestor David for all eternity. The passionate commitment of the Lord of Heaven's Armies will make this happen!"

Isaiah 9:6-7 NLT

Isiah lived about 600 hundred years before Jesus Christ and this prophesy is about Jesus.

A child is born to us- This child is for everyone. Does not belong to one couple or to an individual but to all;

A son is given- note, "a Son and is given to us." Yes, He is a gift to all humanity

The Government will rest upon His shoulders- and then it goes on to say, " He will rule with fairness and justice from the throne of David for eternity. His reign or government will be an eternal. No one could replace Him nor could He be defeated. When we look at the things that are happening in the world today we see that nothing is the same as it was at the beginning of this year 2020. Countries are locked down; People have lost their jobs; governments are going bankrupt, they are spending money they do not have. People are fearful even to get close to another human being.

But there is going to come an eternal government, the hall marks of which is fairness and justice.

He is called Wonderful Counselor, Mighty God Everlasting Father, Prince of Peace. Events have shown us that what we seek for Peace is unreliable.

Only He can bring Peace to you for the child born to us in that manger was none other than the Mighty Eternal God. LETS CELEBRATE THE REAL REASON FOR CHRISTMAS.

All happiness depends on a leisurely home-my humble warm and cozy cottage- cooked healthy Rice & Curry lunch, sitting in my back verandah overlooking paddy fields. The rice comes from the paddy field from the previous harvest, and now preparing for the next crop.

That delightful little hut, with mud walls, where I sit in the breeze which flutters the growing stalks

This is my get away home away from home spending my Christmas without the hustle and the bustle around me.

SEASON'S GREETINGS

The Perennial Festive Season.

The “nip in the air” brings out so much nostalgia of the Festive Season

It is a time for re-kindling our feelings for others in a very sincere fashion

Of all our pent up accumulations of feelings, with much passion

In addition the remembrance of the Creator of a Great Faith not to be forgotten

To add spice to the season comes the winter that makes it look forlorn

Bringing along the snow that covers the land with a carpet so pure & serene

So much of snow with loads being deposited on the roadways and gardens

Confining us to our homes and leading most of us into procrastination

The snow does or should remind humans of need of purity in our worldly sojourn

With the reflection of the sun creating a display of brightness to gladden

A reminder from the Heavens to share our love and goodwill to Family & Friends

And emulate the characteristic signs bestowed by the high heavens

The season also heralds the dawning of a New Year & its celebration

How nice is it to see the dawn with the dazzling display of the sun on the lawn

In these times of hardships let's pause a moment and think of the needy & want

Do charity with dignity to the affected in their struggle to survive the predicament

“A Very Merry Christmas & a Bright and Prosperous New Year”.

Noor Rahim – December 2020.

COVID-19 vaccine: Low-income countries lose out to wealthy countries

Written by Timothy Huzar on December 18, 2020

A coalition of experts and activists warn that next year, only 10% of people in 67 low-income countries will be vaccinated against COVID-19.

Genes that give severe COVID

Researchers have identified [genetic variations that could make some people more susceptible to severe COVID-19 symptoms](#). Mutations in a gene called TYK2 can trigger an excessive immune response to COVID-19 and damage lungs. Mutations in a gene called OAS can keep the protein it encodes from doing its job, which is to stop viruses from replicating. And defects in the IFNAR2 can prevent the body from launching an early immune response, giving the coronavirus time to make a foothold. Researchers analysed more than 2,200 people who spent time in intensive care at UK hospitals to find the genetic mechanisms at play. The findings also point to existing drugs that might help to treat these cases. “It really is an example of precision medicine, where we can actually identify the moment at which things have gone awry in that individual,” says geneticist Vanessa Sancho-Shimizu.

WEIGHT LOSS

You Can Definitely Use Walking for Weight Loss—Here's How to Do It the Right Way

Blood Type Does Not Influence the Effects of a Vegan Diet

Blood type does not influence the health benefits of vegan diets, according to a study published in the *Journal of the Academy of Nutrition and Dietetics*. Researchers with the Physicians Committee compared weight, body composition, and cholesterol levels with blood type in participants who either followed a vegan diet or made no dietary changes from a randomized control trial previously published in *JAMA Network Open*. There were no differences observed in these health outcomes between blood types A, B, or O. Those who followed a plant-based diet increased their metabolism as measured by an increase in after-meal calorie burn of 18.7%, on average, when compared to the control group. These results debunk the “blood type diet” by finding that blood type was not associated with the effects of a plant-based diet on body weight, body fat, plasma lipid concentrations, or glycemic control. The authors note that there is no clinical reason to limit the potential health benefits of plant-based dietary interventions for chronic disease prevention and treatment based on blood type.

Potatoes Maintain Blood Sugar Control Overnight in Those With Type 2 Diabetes

Contrary to popular dietary guidance, eating potatoes may help those with type 2 diabetes control their blood sugar overnight, according to a study published in *Clinical Nutrition*. Twenty-four participants with type 2 diabetes ate one of four experimental dinners that included potatoes prepared multiple ways versus a dinner with basmati rice. Researchers funded by the Alliance for Potato Research and Education (APRE) tracked blood sugar levels from blood samples before, after, and at 30-minute intervals for two hours after the meal. Participants wore blood glucose monitors overnight, as well. Results showed no differences in glucose response between meals, whereas overnight glucose response was more controlled after a potato dinner than the rice meal. Based on these results, the authors stress that clinicians consider foods in the context of meals and not exclude high glycemic index, affordable, and nutrient-dense foods such as potatoes for patients with type 2 diabetes.

Soy increases the risk of breast cancer

As it stands, there is no convincing evidence that eating soy-based foods increases the risk of breast cancer in humans.

This misunderstanding might stem from earlier [studies](#) in rodents. Scientists showed that when these animals received large amounts of soy compounds called isoflavones, they were more likely to develop breast cancer. However, humans process soy differently from rodents.

A [study](#) published in February 2020 searched for associations between soy, dairy intake, and breast cancer risk. The scientists had followed 52,795 cancer-free women in the U.S. for an average of 7.9 years.

They found no clear association between soy intake and breast cancer, but they did identify a link between dairy milk and breast cancer.

However, the full picture is, perhaps, slightly more complex. Some women use soy-based supplements as a natural alternative to hormone therapy during menopause. One large [study](#) investigated whether these supplements might be associated with breast cancer risk.

The researchers found "no association between past use of soy supplements and breast cancer." But, they also found that taking soy supplements, for some women, might increase the risk of breast cancer, particularly for those with a family history.

Overall, as the [American Cancer Society](#) explain: "The evidence does not point to any dangers from eating soy in people, and the health benefits appear to outweigh any potential risk. In fact, there is growing evidence that eating traditional soy foods [...] may lower the risk of breast cancer, especially among Asian women."
