Almonds

Almonds are also a good source of magnesium and have documented slumber-promoting qualities. In [one study](#) there was a 10% drop in the number of students reporting insomnia after eating 10 almonds a day for 14 days

Rice

©TAWATCHAI PLONTIP/Shutterstock

Research suggests that the high glycaemic index of rice (which means it releases sugar quickly) makes it [good for inducing sleep](#). Glucose in the blood makes it easier for tryptophan – the amino acid that generates serotonin and melatonin in the body – to cross into the brain. On the whole though, lower GI carbs (like lentils, whole wheat pasta and rye bread) tend to be healthier. So save the rice trick for when a good night's sleep is particularly important.

The immediate importance of magnesium in your diet

©Shutterstock

Every cell in the body contains magnesium and requires this mineral to function

Magnesium is an essential macronutrient. This mineral is found throughout the body. Up to 60% of our magnesium is stored in the bones. Magnesium is an essential mineral. It's needed for healthy muscles, nerves, bones and blood sugar levels. Found in soil, the reality is that today's soils tend to have lower magnesium content than in the past, with less of the mineral being passed on to us through our diet. In this gallery, we dig into magnesium: how you can tell if you're deficient, and how you can consume more. Click on to find out why you need magnesium now.

Co-factor

Over 600 reactions that take place in the body involve magnesium. It's a co-factor, or "helper" molecule in many of these reactions.

Healthy nerves

©Shutterstock

Magnesium plays an essential role in nerve transmission in the body. Low levels of magnesium in the body can increase stress.

Canned sardines

©alfernec/Shutterstock

[Data](#) from the National Health and Nutrition Examination Survey confirms that low calcium intake is specifically linked with difficulty nodding off and less restorative sleep. Canned sardines are a terrific calcium source for people who can't tolerate or don't want to consume dairy. Or vegans can get snooze-inducing calcium from fortified plant milks, nuts and green vegetables.

Whole grains

©nehophoto/Shutterstock

High fiber intake is associated with more rejuvenating nights under the duvet according to a [2016 study](#). For the purposes of the research, 26 adults spent five nights in a sleep lab during which their nutrient intake was also carefully monitored. Higher intake of fiber (for example from whole grains) produced more deep, or slow wave, sleep – the type that makes you feel perkier in the morning

Bananas

©ch_ch/Shutterstock

A banana is packed with around [375mg of potassium](#) (nearly a fifth of the [daily recommendation](#)), a mineral associated with [less daytime sleepiness](#). Snacking on this bendy fruit before bedtime also tops up your intake of vitamin B6. Low B6 levels can [interfere with the synthesis of serotonin](#) (a calming brain chemical), leading to disordered sleep.

5 Foods That Will Get Rid Of A Hangover Quickly

Next time you're dealing with a hangover, give one of these five foods a try to help alleviate your symptoms. Eating some honey when you're feeling hungover will force the body to get rid of the alcohol in your system faster. This is because fructose digests at the same rate as alcohol. Eggs are a great food to eat when hungover, as they contain amino acids that can help with headaches. Coconut water contains potassium and antioxidants that can help the body recover quickly from a hangover. Water should be the first thing you consume after a night of drinking, as it is essential to rehydrate the body. Many people crave carbohydrates when they're hungover. Oats are the perfect healthy alternative to a greasy bagel or sandwich.
